**Subject:** RE: Preliminary Soil Analytical Data - NY Rad sites

So the only new data I received below is from CRU, correct? Is that the 21 day report?

Eric,

Based on your request, I have attached renamed versions of all the lab data we have received so far. Please review the following below.

Using the last three numbers of each data package as reference, we have received the following data files:  
NFB: 52-1 & 52-3 (I assume there will be a 52-2 and any other)  
CRU: 66-1 & 66-3 (I assume there will be a 66-2 and any other)  
HTC: 53-3 (I assume there will be a 53-1, 53-2 and any other)

We will receive results for Ra-226 via gamma spec. traditional method (see attached Ra-226 options from lab) after a 21-day ingrowth at the lab. Based on our discussions with the lab to meet your expedited needs, we were informed as follows: "we can perform an initial Gamma Spec analysis for soil samples for Cs-137, Ra-226, and Ra-228 using the Ra-226 186 keV with a follow-up recount for Ra-226 only after the full 21-day ingrowth using the Bi-214 keV".

We are in the process of preparing analytical data tables with all these in-coming data and this process will enable us determine which samples have missing data and what type of data we are still expecting. Please note that any data and/or figures we are sending out to you has not passed through our QA/QC process or any form of validation and/or review, and should be used carefully to make environmental decisions.

We are putting in everything we've got to get information across to you ASAP, but we have to "speed with care" in order to avoid major oversights that could be costly. Remain reassured that we will come through for you.

Please let me know if you have any other questions.

Thanks,

**Ben Nwosu**
